FAN CLUTCH OPERATION

Fan clutch is a component of the cooling system that varies the fan speed to meet the cooling needs of the engine. When the engine reach the point of heat fan clutch will start operate for cooling purpose . Fan clutch applied with fan blade, water pump and pulley.

According the of the Fan clutch performance there have 3 types, Non-thermal, Thermal and Electronic fan clutch. Mostly as seen on the market is Thermal Fan clutch.

NUK Fan clutch is engineered to meets the OE standard specification and performance for provides fuel saving , noise reduction and protect engine from overheat.

The air temperature passing through the radiator sensed by the temperature sensor, also as known as bi-metal thermal spring on the middle of the fuel pump. When it senses the valve inside of the clutch will works as a switch to open a reservoir containing silicone fluid inside the clutch, When cold the silicone fluid will pumped to reservoir and hot the silicone fluid will transferred to working area thereby increasing the fan speed and works as cooling purposes.
